PARIS

This catalogue is part of a collection published by the Edinburgh School of Architecture and Landscape Architecture (ESALA), Edinburgh College of Art, University of Edinburgh. It documents student design work produced in the Master of Architecture (MArch) programme in 2017-18. Each catalogue describes one of the following five design studios in the MArch programme. The full collection is available to view online at issuu.com/eca.march.

HOTEL PARIS

*Hotels are becoming the generic accommodation of the Generic City, its most common building block. That used to be the office — which at least implied a coming and a going, assumed the presence of other important accommodations elsewhere. Hotels are now containers that, in the expansion and completeness of their facilities, make almost all other buildings redundant. Even doubling as shopping malls, they are the closest we have to urban existence, 21st-century style.*ⁱ

Rem Koolhaas

In his 1995 text *The Generic City*, Koolhaas described a transformation of the urban environment that seemed to conflate two traditionally distinct typologies, the office and the house, into one: the hotel.

This phenomenon shows how the activities of working and living, as well as their mutual relationship, have changed in the post-industrial metropolis. Work has detached itself more from processes of industrial production and has become largely immaterial: its value does not reside anymore in the physical qualities of the objects produced but rather in the amount and quality of information and knowledge embedded into it.

On a cultural and social level, it is not easy to provide an unambiguous description of *knowledge work*, generically defined as ‘work which involves handling or using information’.ⁱⁱ Similarly, in architecture, the production and manipulation of knowledge cannot be easily supported or captured through space. Following the evolution of knowledge work, workspaces have changed and are continuously changing, deeply influencing the transformation of cities and the life of their inhabitants.

ⁱ Rem Koolhaas, “The Generic City”, in *S,M,L,XL* (New York: The Monacelli Press, 1996), 1260.

ⁱⁱ Oxford English Dictionary.

Traditionally, the production of knowledge was performed by highly educated people gathered in specialised buildings. First churches and monasteries, then libraries, universities, museums, and finally, in the late stages of the industrial revolution, it was offices which hosted communities, groups and companies made up of people devoted, more or less collectively, to the advancement of philosophy, science and business. Today, knowledge work no longer belongs exclusively to a sphere of activities performed in institutionalised spaces but has spilled over into the city. The boundaries that used to isolate corporate headquarters, universities, libraries and museums within the urban fabric are becoming more and more porous, producing environments that are increasingly less specific: knowledge work tends to be performed in spaces that would not necessarily be recognized as working environments.

When work spills into a multitude of city spaces, it inevitably impacts on residential activities; increasing numbers of people run a broad spectrum of professions from home. More interestingly, knowledge work relies on a set of ‘techniques that human beings use to understand themselves’ⁱⁱⁱ which are traditionally performed in the domestic space, so it is not always easy, if at all possible, to trace the boundary between productive and unproductive activities. There is an increasing domestication of the working environment and a symmetric appropriation of ever-larger parts of the domestic space performed by productive activities.

Hotel Paris looks at the relationship between these two environments, the space for residence and the space for (knowledge) work; it seeks to develop possible definitions of a building typology – the hotel – that combines a multiplicity of programmes into one complex.

In this context, when reading “hotel”, we may as well read “office”, or “home”. In the contemporary city, spatial qualities do not depend on the functional programme(s) attached to spaces.

iii Michel Foucault, “Technologies of the Self,” in *Ethics: Subjectivity and Truth*, ed. Paul Rabinow (New York: The New Press, 1997), 224.

GIORGIO PONZO

The city of Paris is recognised as an ideal laboratory for designing architectural prototypes of this kind and provides a set of references that can be instrumentalised on different levels.

In terms of knowledge work, Paris is recognised as a laboratory for the production of knowledge across generations of projects for museums and libraries, ranging from the Louvre to the Centre Pompidou, the Palais de Tokyo and to the projects for the Bibliothèque Nationale on the Richelieu and the Mitterrand sites. In terms of housing, Paris is recognized as a laboratory for housing typologies which are not just houses, from the *hotels particuliers* to the experiments of the twentieth century avant-gardes. Finally, Paris is also recognised as a laboratory for what Charles Rice would define as “interior urbanism”,^{iv} from the arcades, to the commercial galleries, to the grand palaces for the World Exhibitions.

Building typologies consolidate a disciplinary knowledge that accumulates through centuries. The evolution of programmes, construction materials, social needs, etc. contribute to innovate typologies which, in a strange coincidence of opposites, are at the same time the most stable and the most malleable yet also subject to material change during the design process. One could say that every design, or every building, is always a reflection on types, oscillating at times between disciplinary continuity and innovation: by combining consolidated architectural elements in an unconventional way, a building can become a new standard, a new type.^v

In this sense, *Hotel Paris* worked on some features of the standard hotel and attempted to re-articulate them in a set of spatial qualities which can be relevant for the unfolding of life in the contemporary (Western) metropolis – more and more entangled in the overlapping of the activities of production and consumption, creation and re-creation.

MILES KELSEY - THE CITY ASSEMBLAGE

The projects collected in this catalogue aim to re-elaborate the typology of the hotel. The departure point can be considered the standard hotel, as it is presented in the handbooks of architectural design and in historical surveys.^{vi}

Then, the traditional typology is manipulated either by adding alien programmes to it, by highlighting the importance of the residential part of it, or by inserting spaces for work in it.

When referring to the “hotel”, *Hotel Paris* talks about a building that is at the same time the standard hotel and something else, a place of residence and a place of work, an integral part of the city fabric.

The functional mix of the hotel makes it a building type that reproduces, at an architectural scale, the diversity of programmes and spatial qualities that are usually experienced in the urban environment at large. In the typology of the hotel, the boundary between architecture and the city is questioned beyond the definitions of scale.

vi See, for example, Ernst Neufert, Peter Neufert, and Johannes Kister. *Architects' Data*. THE HOTEL AND THE CITY

The phenomenal success of Airbnb exemplifies how the hotel and the home can overlap and converge. The hotel industry offers more and more accommodation which tries to remove the impersonal feel of the hotel experience, offering travellers an *authentic* life experience.

Family apartments are turned into temporary accommodations, while hotels are designed as “open houses”.

In Paris, the building “designed” by Georges Perec in his novel *Life, A user's Manual* could be the model for this phenomenon. It is, at the same time, an authentic Parisian apartment block and a purely fictional space. Furniture, objects, and the rooms' decoration – made visible by removing the building façade – embody present and past inhabitants' life.

The hotel works on the boundary between being a miniature, self-contained city and a fragment of an existing urban fabric, enmeshed into it deeply. The relationship with the context is manifested in two specific parts of its architecture, the ground floor and the façade.

The ground floor of the hotel works as an interface between the space of the city and the hotel interior. The lobby opens itself up to the surrounding context, both on a conceptual and a physical level. The environmental and the socio-cultural background, the activities in the surrounding buildings and blocks, the character of the neighbourhood and the history of the place all influence the articulation of the ground floor: it is here that the hotel renounces to be an autonomous object in the city and transcends its singularity, blending into the urban fabric. The ground floor is unavoidably a porous space, between the city and the hotel interior, with more or less controlled accessibility to its different areas. Rather than delegating the movement and the activities on the ground floor to technological systems and gates (badges, codes, concierge, etc.), architecture can put in place a series of spatial and tectonic strategies which manipulate the building porosity, fashioning, for example, how and why one is dragged into or kept at a distance from certain areas of the building.

The façade of the hotel needs to be easily recognisable and unique, iconic. At the same time it has the more mundane need to provide natural light (and, in the old times, air) to a series of indistinguishable rooms. The abstract diagram of the hotel façade (almost perfectly materialised in the Haussmannian facades) presents an array of identical windows on a flat surface. In this way, the façade makes visible the lack of diversity in the spatial qualities of the hotel interior. The manipulation of the hotel type, breaking the monotonous repetition of typical floors and identical rooms, questions the way in which the hotel makes its appearance in the city. The façade can be inhabited, become deeper. It is an environment which can manage in affective terms the transition between the interior and the outside by means of its material elements.

THE HOTEL AND ITS INHABITANTS

Working on the hotel, as a typology that combines living and working, can help us to reflect on the ways in which we live and work today in our cities. Contemporary conditions of living and working present some features which deserve to be spatially investigated.

The tension between individual and collective expression can be seen in the traditional articulation of the hotel typical floors. If the ground floor works with the porosity of the space towards the surrounding environment, the typical plan distributes and articulates quite different spatial and functional features, privacy and intimacy, against a set of collective activities.

Multiple levels of the hotel are characterised by the stacking of nearly identical floors. Almost by definition, the typical plan has no quality of uniqueness: it aims to be repeated n times within the building and it accommodates the repetition of indistinguishable individual spaces. The hotel room itself seems to materialise an apparent contradiction: being personal (the space of a specific guest) and being generic (the space for any guest). The generic hotel room provides a neutral experience, not meant to stimulate emotional attachment in its users. The hotel room is a minimal scenery that allows us to

In a day of joint presentations, the ESALA students joined the students from the ENSA Paris-Malaquais working in the studio Ville et Utopie led by Gilles Delalex, co-tutored by Giorgi Stanishev and Simon Boudvin.

GIORGIO PONZO

ADAM MEARS AND HARRY LEWIS PRESENTING THEIR PROJECT AT THE ÉCOLE NATIONALE SUPÉRIEURE D'ARCHITECTURE PARIS-MALAQUAIS.

be completely ourselves, or to be anyone we want to be, re-inventing ourselves with each night (or day) spent in it. The room is impersonal, it suits any user, allowing them to bring in their identity. The actions performed in the hotel rooms are invisible, they leave no trace. Yet, the room is personal. It is the space where activities which are mostly related to the care of the self are performed: sleeping, washing, dressing. The room is where one gets ready for a performance held somewhere else.

The life in the hotel (as well as the workspace) is maintained by the continuous labour of people and equipment which makes the hotel ready to be inhabited. A series of functional spaces support the life of the hotel. Even if some of these programmes can be outsourced, preparing food, washing, bringing materials in and out or storing materials, heating and cooling air and water, allowing staff to get ready to work or to rest, managing guests and employees, etc., are all crucial activities for the functioning of the hotel. The spaces that host these programmes are normally hidden from the public and the people who work in the hotel seem to move on different trajectories from the hotel guests'. Re-thinking the hotel typology might require to re-think the role these servant spaces and programmes play within the organisation of the hotel. Functional spaces as well as spaces for circulation could contribute to define the character of the hotel. Their visibility (or lack thereof) affects users' experience, behavior, and performance.

Rather than proposing clear answers for the development of the future hotel, the projects developed in the studio reflect, through architecture, on the temporality of habitation and occupation. It is in this sense that the hotel, a residence for non-residents, is meaningful. The existential dimension of the life in a hotel is explored, working on contradictions rather than through straightforward solutions. Each project is a short story about the many different types (in this case of people rather than buildings) which inhabit, live and work, in our cities.

INFRASTRUCTURE D'INNOVATION

JACK SNEDDON

By tapping into the fabric of Paris' infrastructure, *Infrastructure d'Innovation* establishes a new, expandable network of innovation and research centres which cater for the city's flourishing tech and start-up community. Paris' expansive metro system provides an ideal context for the proposals: pockets of urban space on the vacant and neglected areas of the city's metro lines have the potential to become vibrant and interconnected.

Two proposals along the metro line number 6, combine living, working, and flexible community spaces in a single, hybrid typology. Influence is taken from the unique and constrained infrastructural context, where the concept that buildings themselves can become infrastructural entities is explored. The very term "infrastructure" is suggestive of a sense of rhythm, motion, and a machinist tectonic. These qualities are considered at a range of scales and lead to the definition of appropriate architectural languages, such as the inclusion of kinetic architectural elements.

The inherent temporariness of the accommodations is addressed in different ways, ranging from the design of completely adaptable spaces to the design of single occupancy "emergency" accommodations to be used by workers experiencing prolonged hours. An array of working environments are proposed, from open, co-working zones to specialised research laboratories.

▲ PROPOSED STREET VIEW

► SECTIONAL PERSPECTIVE/ INNOVATING INFRASTRUCTURE

FROM BORDERS TO HOME

MILES HEATH

This project aims to redefine the hotel typology as an extension of civic life and a key component in a process of integration for refugees. This concept is a reaction to the existing refugee crisis proliferating in the 19th arrondissement where the site is located. The overarching idea is to see refugees entering the country not as a burden on society but as an inclusive demographic to contribute and enrich city life in Paris.

Accommodations are adaptive and flexible through the utilisation of central modules that can unfold to the specific needs of the inhabitant. These units provide the framework for individuals and families to begin new lives for periods of up to 9 months during application for asylum and potentially citizenship.

The building operates off a central core, which divides the site allowing programmatic diversity and boasting different architectural narratives, to plug in through careful but open thresholds. This creates legible navigation through the building as well as promoting self-observation and community. Circulation areas are generous to promote informal interaction between inhabitants.

The internal partitions of the building are as transparent as possible whilst providing the necessary systems for the users' privacy. Light and warm environments aim to create a greater connection with the surrounding context.

THE HOTEL, THE HOME ►

FOOD FOR THOUGHT

HARRIET GARBUTT

Food for Thought is a hotel that stems from the socio-economic deprivation in the 19th arrondissement of Paris. The site is situated in an old substation near the town's Municipality, and the Mission Locale de Paris, an organisation that provides information, guidance and support to help 16-25 year olds with little or no qualifications develop a professional profile.

The hotel is housed within a scaffold of timber framework, with one central, open-ended atrium and the distributed programmes almost balancing off it. Selling and trade operate the lower ground to raised ground floors, whilst growing and cultivating are expressed from first floor to third. The hotel rooms themselves are informed by the typology of lean-to greenhouses, with a polycarbonate cladding supported by a timber structure. The use of timber and semi-transparent materials contrasts with the surrounding limestone context presenting a lightweight facade and a temporal feel to the overall design.

The hotel emphasises a 'healthy lifestyle means a healthy mind' approach. Local and fresh produce is sold and traded in the public market hall, whilst a roof garden and greenhouse offer the opportunity for paying guests to grow and cultivate vegetation. The finance generated from the guests funds the upkeep of the hotel, as well as contributes to the running of the Mission Locale de Paris.

◀ MONDAY MORNING MEAT DELIVERY

THE VERTICAL LOBBY

JAN GROEHOLT

Paris 19th arrondissement lacks small or medium sized venues for local musicians and live performances space. *The Vertical Lobby* aims to merge the typology of a hotel with music production and performance where the architecture lends itself as a stage in a vertical manner.

In the conventional hotel, vast, ghost-like hallways are used to compartmentalize different parts of the programme. *The Vertical Lobby* aims to blur the distinction between the hotel guests and the performing artists, reducing servant spaces and integrating the programmes.

The ground floor is split in two. One side invites the visitors in and directs them towards the different levels and parts of the building. In the other different activities can take place, and people can take ownership of it.

The design is composed with four main blocks that step vertically and where the different parts of the program are located. The top levels of these blocks act as performing venues and lounge spaces that provide different spatial qualities.

The façade of the building is a hybrid between a classical Parisian elevation that blends with the surrounding context, and a neutral glass façade, a window that interrupts the classical rhythm.

- ▲ ARTICULATING THE FACADE
- ◀ THE VERTICAL LOBBY
- ◀ URBAN POCKETS

FAST / SLOW

SI QU

A world renowned scenic area, located along the left bank of the River Seine and in close proximity to the Eiffel Tower, hosts a multiplicity of activities of very different nature that include tourism, leisure, and art exhibitions as well as highly refined administrative activities due to the proximity of corporate headquarters and national embassies.

In this condition, the space of the city can be experienced at very different paces, fast or slow, according to the rhythm and intensity of the visitors' lifestyle. The ideal city dwellers can be defined either as "artists" or as "diplomats", two groups with a radically different attitude towards the surrounding urban environment. The artists engage at a slow pace with the life of the city, aiming to experience and know it, residing for long term, and eventually produce a piece of creative work. The diplomats are short term city users, casually engaged with the metropolis' lifestyle.

Fast / Slow provides spaces for both types of city users, and offers them the possibility to meet in an in-between territory that works, at the same time, as circulation system within the building and as a space for events that do not exclusively address one group or the other.

SI QU - FAST / SLOW

▲ WITHIN ITS PARISIAN CONTEXT

MODES DE VIE FLEXIBLES

JAKE WARRINGTON

Paris 2024 Olympic Games promise to be the most sustainable Games yet, offering a legacy strategy that far outstretches the summer Games. *Modes de Vie Flexibles* uses an existing sports complex in central Paris as the foundation for a project that embeds flexible longevity into a design that will initially serve as a training venue in the 2024 Olympic Games. Following the Games, the design will provide social housing, recreational facilities, and working environments, combined into one complex.

Modes de Vie Flexibles looks at flexibility across different scales, ranging from the domestic to the urban environment, making use of fixed elements that enable a flexible use of the in-between spaces. At the urban scale, the building encloses a public square that can be used all year round for different purposes. At the scale of the individual dwelling, two parallel thick walls containing all the essentials of daily life make room to an open unobstructed floor plan, easily reconfigured by the users. The reduced living offers the comfort of a typical dwelling, yet the reduction in footprint allows it to be more affordable. Throughout the building, social spaces aim to encourage social interaction and a community ethos, opening up the building to the surrounding social and urban fabric.

▲ THE PROPOSAL SET WITHIN THE PARIS 2024 OLYMPIC BID

▶ INHABITING WALLS WITHIN

▼ TECHNICAL DETAIL SECTION

L'ASSEMBLAGE DE LA VILLE

MILES KELSEY

The Parisian 13th century city wall, originally conceived by King Philippe Auguste as a tool for separation, and fundamental safe guarding, is re-imagined as a site of connection, occupancy and collation.

The extents of the historic wall is used to define, extract and assemble a series of unique spatial qualities considered to exemplify the fundamental qualities of the city's most central arrondissements: *Composed, Fabricated, Fortuitous, and Extended.*

Assembled along the largest remaining portion of the historic wall, L'Assemblage De La Ville re-establishes these fundamental instances, as a collection of habitable monuments, re-articulated by new contextual conditions and the redistribution of the extracted programmatic qualities: *Creativity, Language, Consultancy, and Betterment.*

The assemblage completes a synthesis of working, living, learning and teaching environments through which start-up companies, young business and freelancers are invited to live and work in an exchange for opening their practices to the surrounding urban and social fabric. The continuous exchange of experiences creates a unique urban ecosystem – based profoundly on the city's fundamental qualities – that blends education and working life.

▲ EXTENDED BETTERMENT

◀ FABRICATED LANGUAGE / FORTUITOUS CONSULTANCY / COMPOSED CREATIVITY

SPECTACLE OF KNOWLEDGE

STEVEN WOOTTON

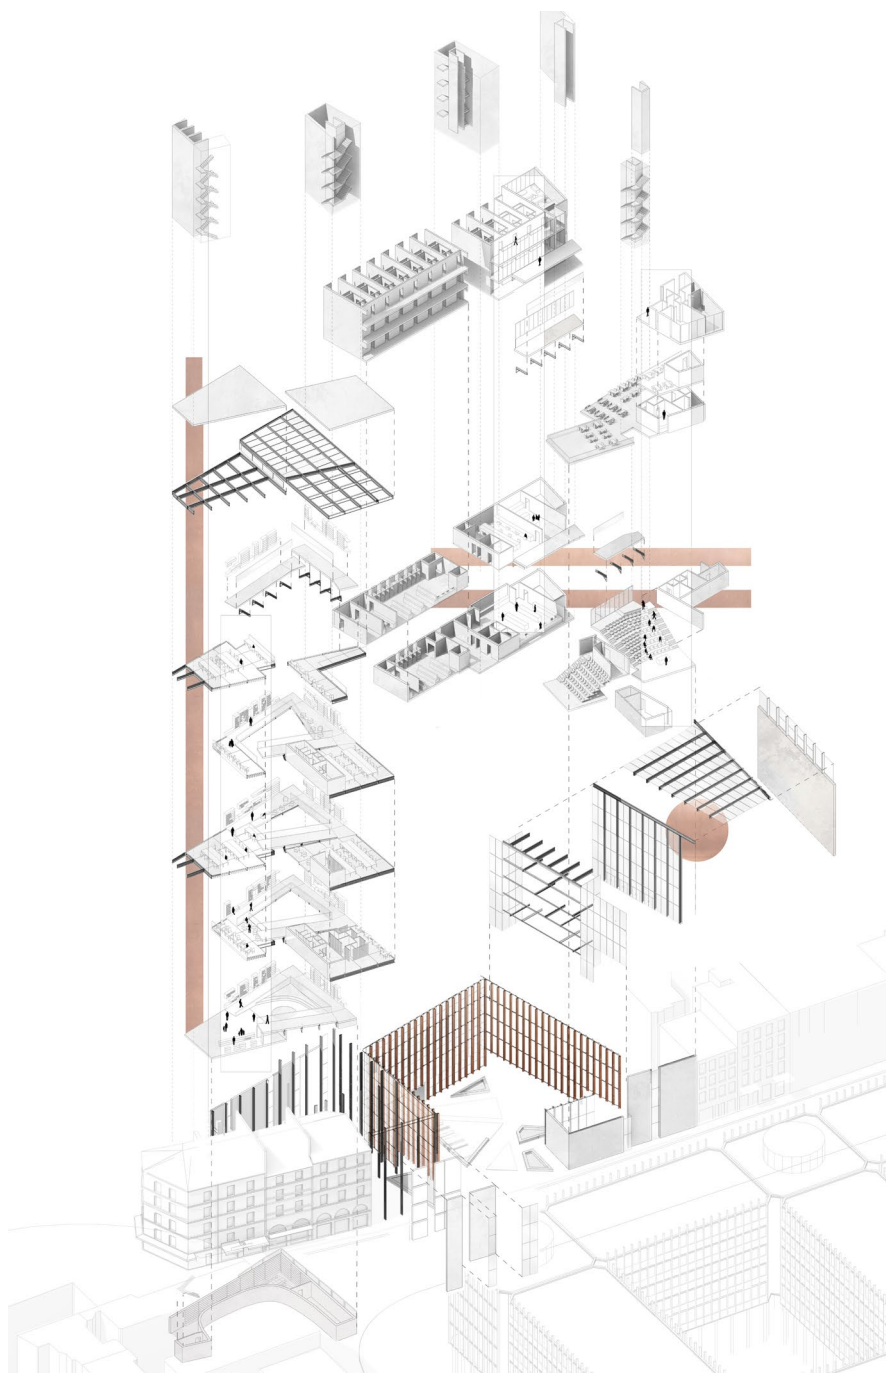

Often being exclusive to university students, the opportunity of learning is less available to the wider public. The *Spectacle of Knowledge* reinforces the presence of the university as a fundamental part of the city and proposes to create a network of knowledge across Paris.

The design promotes the activities of the university by incorporating a 'shop-front' concept, allowing the public to see research work taking place in the science laboratories and lecture theatres. Visitors are invited to come in, learn, collaborate, and actively engage with the university activities.

Inspiring all generations, the main space will host exhibitions and collections provided by the university. Knowledge is made accessible, visually and functionally. The space of the library materializes and celebrates this openness by inviting the public to circulate up a ramp. The ramp acts as book storage and reading booths, inspiring visitors to discover books that they would not necessarily search for.

Encouraging knowledge production, celebrating learning, and reshaping the way the people of Paris connect with Universities, the *Spectacle of Knowledge* aims to provide an engaging way of connecting with the exciting work within Université Pierre et Marie Curie.

▲ UNIVERSITY CONTEXT

INHABITING THE EDGE

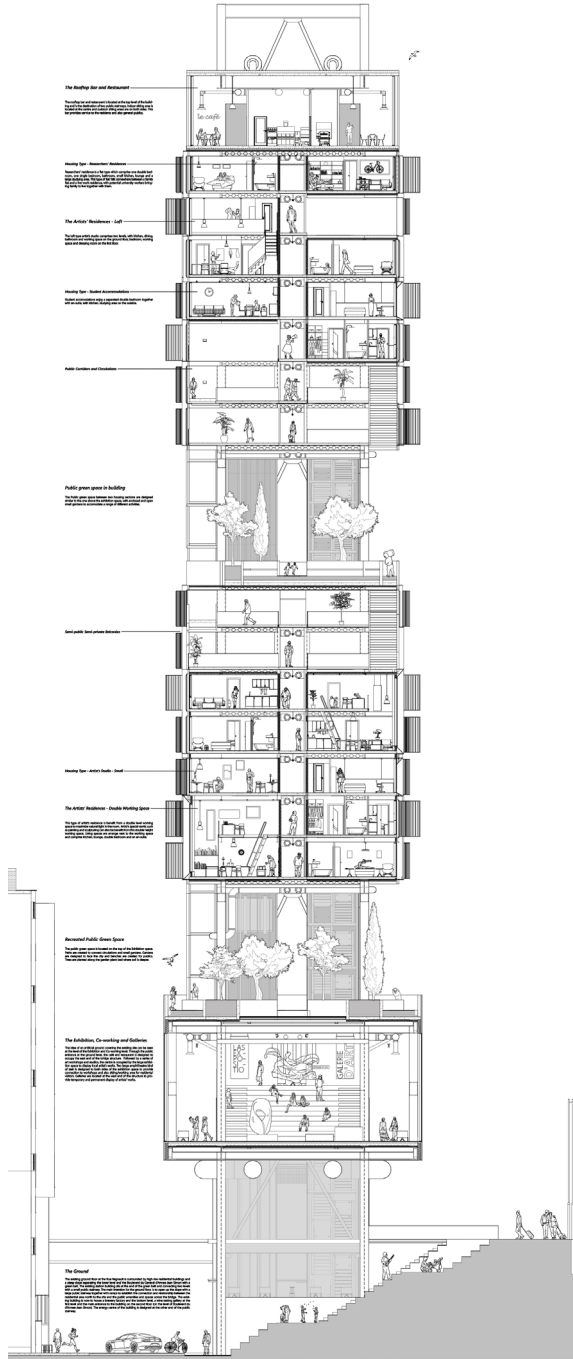

YIDA ZHOU

The passengers building of the Gare de Massena preserves the memory of Paris' Petite Ceinture (Small Belt) railway culture and industrial history that was left behind in the 13th arrondissement XX century development characterized by the construction of high rise buildings and transportation infrastructures that act as barriers in the urban fabric.

Inhabiting the Edge provides spaces for the creative industries of the district while reconnecting the Gare de Massena to the surrounding context. Contributing to the Rive Gauche urban redevelopment and making the public realm richer and more vivid, the new complex offers a co-working platform, exhibition and gallery spaces to local artists. A vast artificial ground, suspended above the Gare the Massena and the edge of the bridge, creates public green spaces within the building.

Eight different types of dwellings accommodate artists, university researchers, and students, a dynamic and creative community. The circulation connects the public spaces of the building, from the ground floor to the elevated terrace, to the rooftop garden in a continuous journey that captures the views of the old and new Paris on both sides of the building.

UNVEILING ART PRESERVATION

OLIVIA NIEN-LIEN WEI

The conservation of artworks is a crucial activity for a city like Paris whose reputation as one of the cultural global capital significantly supports the city economy. However, the actual work of conservation is often hidden to the public not allowing to understand not only the material but also the cultural and social aspects related to the construction and preservation of a cultural identity through the conservation of artworks.

The historical site of the Tuileries Gardens, at the heart of one of Paris monumental axes and in close proximity to a series of world-renowned cultural institutions, offers the possibility to reflect on the role, the visibility and prominence, of artwork conservation in contemporary society.

Unveiling Art Preservation combines workshops for the restoration of artworks with spaces for exhibitions and accommodations for scholars involved in the preservation studies and work. The working spaces are located underground and made visible to the public by a series of openings, skylights and patios. The living spaces are elevated above ground, allowing the continuity of the public space of the Tuileries Gardens to be maintained.

◀ DWELLING IN THE TREES

◀ THE PUBLIC REALM

◀ LIVE - WORK THRESHOLD

CITY OF THE FLOATING ISLANDS

LINSHAN FAN

The proposal for Paris Dauphine University new Economics Research Centre is a microcity that combines working and living in the public park of Bois de Boulogne.

As in Ungers and Koolhaas' 1977 *The City in the City*. Berlin: A Green Archipelago, *The City of the Floating Islands* imagines an urban environment made of seemingly autonomous blocks distributed in a green network. Designed as an urban villa, the project includes both individual and collective spaces that respond to different needs and desires, allowing individuation within a collective environment.

The proposal is developed around a series of blocks (the islands) – containing specific parts of programme – linked by bridges and platforms used as flexible workspaces. Visually connected throughout the complex, these in-between spaces encourage interaction among the users fostering casual collaboration and inspiring innovative ideas. A unified facade system forms the envelope for a greenhouse garden contained under one roof that acts as a bioclimatic device by providing solar heating, natural cooling and rainwater harvesting for the building. On a publicly accessible roof garden open to spectacular views towards the city, individual accommodations with shared courtyards are provided for a mix of short- and long-term dwellers of the research center, continuously renewing the community of residents of the microcity.

PLATFORMS ON THE EDGE

PHOEBE CHAN

Platforms on the Edge aims to re-engage the city with the river filling the gap between the Palais de Tokyo and the bank of the River Seine. A series of platforms works with the topography of the site and extends the vibrancy of the public space in the Palais de Tokyo courtyard towards the river. A film production studio, open both to the public and to the creative workers temporarily engaged with a project, makes the site accessible to and used by a diverse audience.

Platform on Edge focuses on the horizontal flow of spaces in a compound structure defined by differing qualities of light. The programme is split into light and dark activities. The light part of the programme contains the main public spaces and the accommodations. Being fully transparent, it engages with the public space of the street and brings visitors into contact both with the film production and collection, and with the river. The dark part of the programme hosts the film production spaces, mostly contained in a series of thick concrete cores, discrete volumes isolated from the rest of the city. A delicate timber lattice roof frames these two different spatial experiences and attitudes towards the city into one structure.

▲ DETAILED SECTION / ACCOMMODATION

◀ CONCEPTUAL COLLAGE / THE BUILDING PLATFORMS

▼ DETAILED PERSPECTIVE SECTION

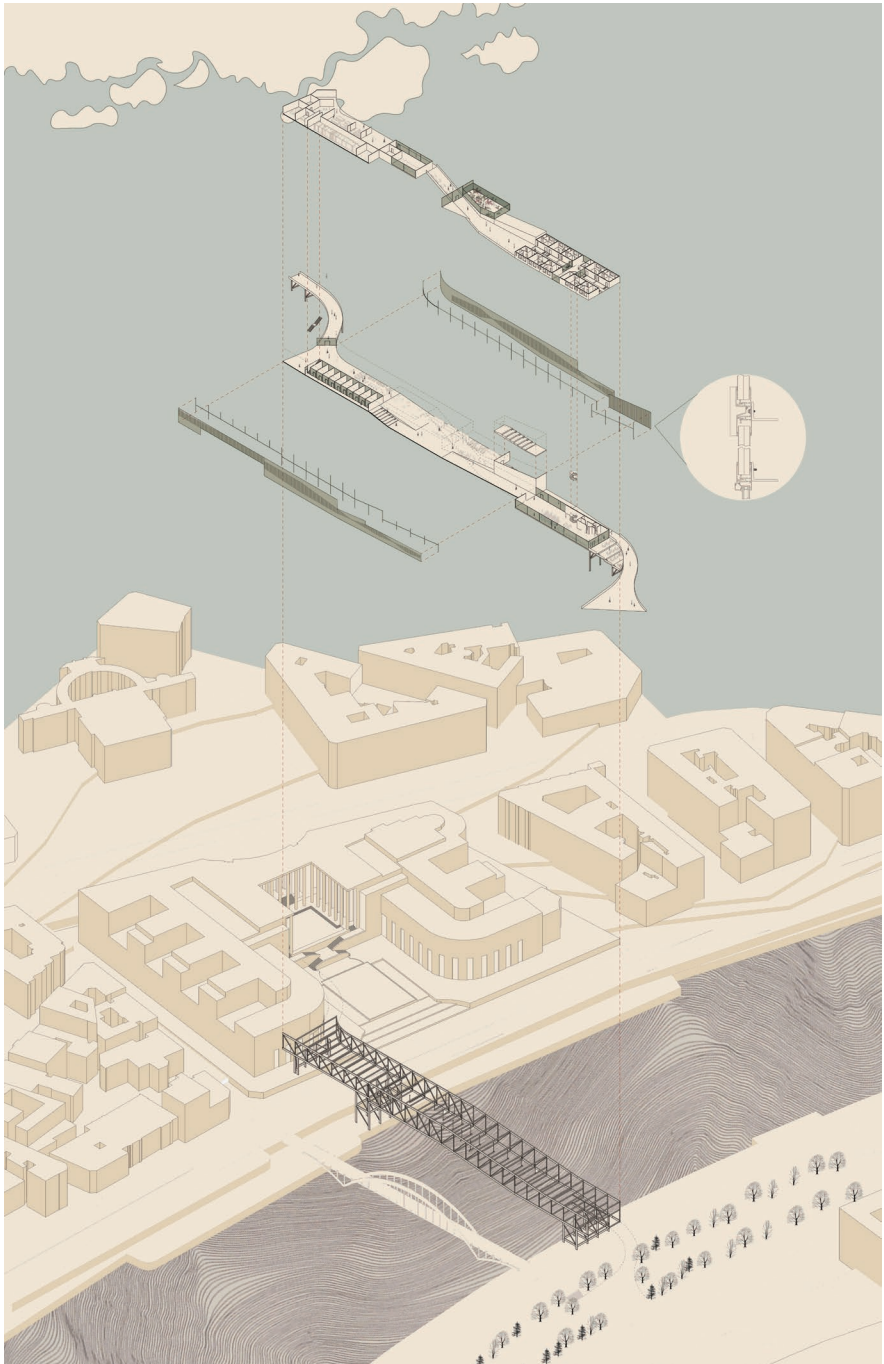

ARTISTE SUR LA SEINE

LU WANG

Artiste sur la Seine is a complex for creative production that spans across the River Seine and connects two prominent Parisian cultural institutions, the Palais de Tokyo and the Musée du Quai Branly. Being located on the river, the building escapes the confrontation with the surrounding historic and symbolically charged context, offering to the temporary residents and visitors, unconventional ways for producing, exhibiting, and experiencing art. The building offers temporary accommodations and studios to a small community of invited artists.

Two circulatory routes are intertwined within the bridge structure. One acts as a public gallery, open to the visitors of the surrounding museums as well as to the occasional passers-by. The other is an artist residency, at the same time highly embedded in the Parisian cultural context and yet detached from it. The artists and the public share different facilities, including an auditorium, shops, cafes, and archives.

Gently inclined floors allow a smooth transition between spaces at different levels within the structure. One end of the bridge is directly connected to the Palais de Tokyo. The public path then slopes down and reaches the pedestrian path on the other side of the river.

THE COLLECTIVE INHABITATION

ROUCHEN LIU

Located in the park that borders the Jussieu University campus, *The Collective Inhabitation* brings together the academic population and the business community, aiming at connecting, visually and functionally, the university with the city of Paris.

The conventional separation between environments for living and for working is questioned. These two kinds of spaces are brought together in one complex structure, intertwined with one another along uninterrupted spaces for circulation. Throughout the building, sections of each floor are connected with the upper and lower levels, resulting in a spatial continuum that aims to foster visual connection, casual encounter, and collaboration among the different users of the building.

The spatial continuity challenges both the segregation of program and the traditional subdivision between public and private spaces. The resulting collective environment provides high-tech start-up companies, creative young professionals, and students a platform for cooperation and creativity.

HAUTE COUTURE INSIDE - OUT

MAOYU MAO

In Paris, everybody wants to be an actor; nobody is content to be a spectator,
Jean Cocteau

French fashion is deeply connected with the idea of luxury and craftsmanship. *Haute Couture Inside-Out* explores these characteristics by assembling a series of spaces devoted to the production and fruition of high-end fashion products.

The project is located in the Esplanade des Invalides, a historical site by the River Seine, within the city's central fashion circle, in close proximity to the Grand Palais, the Avenue Des Champs-Élysées, and other venues traditionally used during the major fashion events.

Haute Couture Inside-Out is a hotel that offers to its guests the experience of re-fashioning their life becoming temporary members of the fashion (industry) mob. Three types of rooms (the “mirror room”, the “fitting room”, and the “wardrobe”) are designed to create a unique experience for a diverse set of customers ranging from haute couture students, to fashion enthusiast travellers, and fashion professionals. Workshops for the production of haute couture products, spaces for performance and for fashion collections presentations complement the offer of the hotel, allowing the complex to respond in different ways to the fashion events taking place in different times of the year.

LE CIRQUE DE LA MUSIQUE

CHERIE WONG

Musicians and their audiences are invited to *Le Cirque de la Musique* as a retreat from the noise of the urban city. Situated in the 19th arrondissement, the hotel bridges the gap between the Cité de la Musique and the Marseillaise Park providing informal performance and recording studio spaces for musicians. The hotel is arranged around an intimate courtyard and follows the form of ancient Roman circuses and theatres. The hotel rooms and the public spaces look into the courtyard and a stage situated in the southern side of the building. The landscape surrounding the hotel extends into the neighbouring residential quarter and encourages the use of the open-air theatres and the public performance stage.

There are two main types of hotel rooms, one for musicians and another for the audience. Musician rooms include a rehearsal space, which opens up either into the courtyard or the Marseillaise Park. Audience rooms are designed with a private green oasis which acts as a divider between the living and the sleeping area. *Le Cirque de la Musique* offers a temporary intimate space sheltered from the urban context in which musicians and their audience are encouraged to interact in a dedicated and relaxed environment.

◀ THE URBAN REALM

LIVING INSIDE ART

BULAT GAFUROV

Living Inside Art challenges the conventional modes of fruition of the artworks Paris is famous for. Making use of advanced information technologies (virtual and augmented reality), the art gallery and the hotel typology merge into a hybrid building enabling a unique enjoyment of the art pieces contained in Paris' world-renowned museums.

The hotel guests have the possibility to experience artworks of different historical periods in an immersive way. In digitally constructed virtual environments the conventional scale, proportion, and the position of the viewer in relation to the artwork are challenged.

The hotel room is the place for an individual, solitary experience of art. The hotel corridors and lobbies are transformed into virtual theatres where art becomes alive and the boundary between the audience and the artworks is blurred, opening the experience to forms of participation and interaction of unpredictable outcome.

The technologically augmented space plays not only with the users' encounter with art, but also with the capacity of architecture to define clear boundaries between different spaces, the room and the museum, the corridor and the art gallery, the urban space and the interior: space becomes potentially infinite and infinitely reconfigurable.

THE HYPERLOCAL TEMPLATE

JAMES MA

The Hyperlocal Template is a hotel embedded in the 11th arrondissement where a strong traditional and diverse Parisian character has survived gentrification. The hotel entrance is located on 100 Rue Amelot and extends itself through Passage Saint-Pierre Amelot where visitors will be exposed to a range of craft workshops. The hotel is an opportunity for guests to ‘truly’ experience the daily interactions of a local Parisian community. *The Hyperlocal Template’s* belief is that the hotel should be an environment that serves both the community as well as the hotel guests.

Staying true to its aim of openness and inclusion, *The Hyperlocal Template* does not have a bias in providing space just for its guests but harbours a variety of social, community and cultural programmes. On street level, the Passage Saint Pierre Amelot has been transformed from alley to the heart of the community with new open spaces that can be accessed by all its neighbours. Ascending through the hotel the users and guests will find a mixture of workshops, performance areas, co-working spaces, fitness centres, and galleries interlocked with basic hotel amenities. *The Hyperlocal Template* will adapt to the community’s requirements over time, serving as a template of a new residential typology, authentic yet changeable.

ENCAPSULATED LIVING

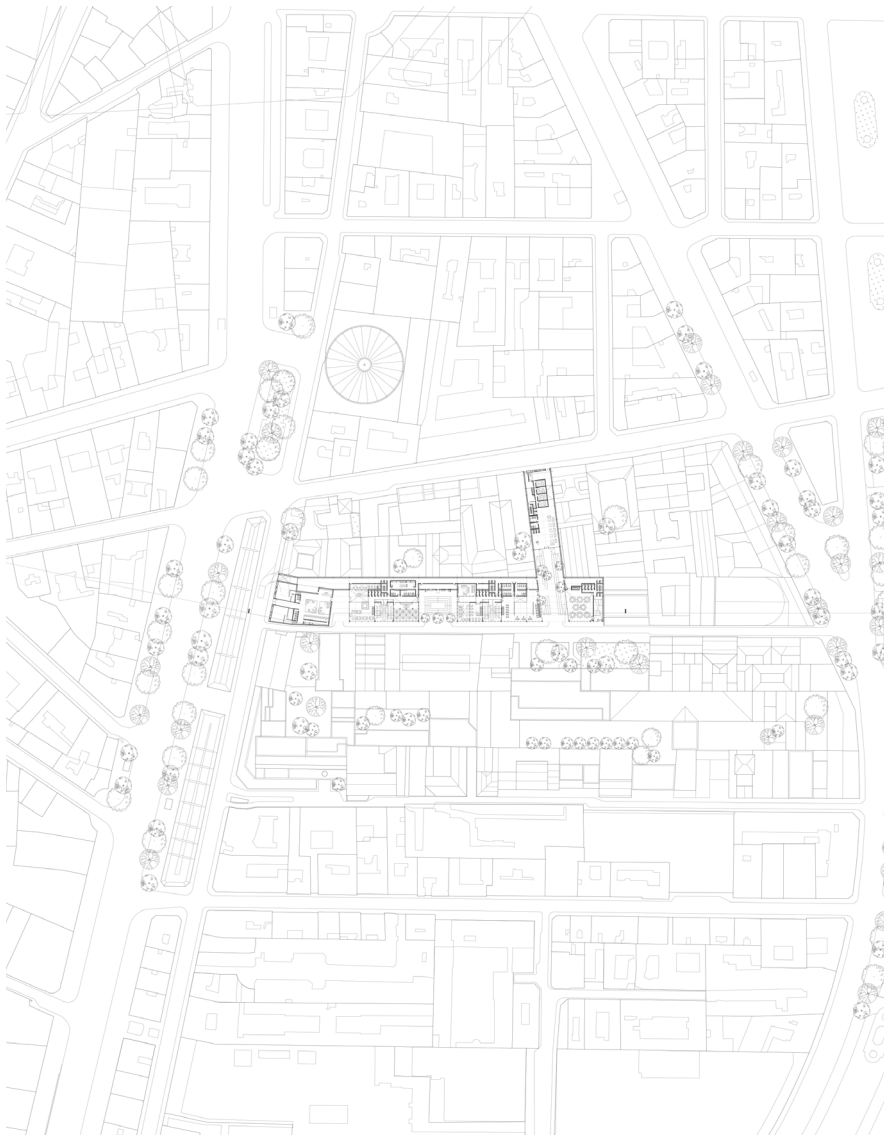

JOSHUA SIU

The densely populated 11th arrondissement provides spaces that enable its population (mostly constituted of single adults) to live a busy metropolitan lifestyle, very stimulating and very challenging at the same time.

The rather setback and hidden site can provide and promote a physical and mental withdrawal from the demanding lifestyle that dominates the arrondissement. A series of wellness and meditation spaces are provided to enable guests to live their lives in the same district with an added layer of depth, gaining a deeper understanding and awareness of the self.

Encapsulated Living hosts a diverse set of spaces for meditation activities involving different numbers of occupants. The Absorption Atrium marks the start of the meditation journey on the ground floors of the individual towers. This space allows the users to have visual access to other areas within the building, encouraging the first step back from activities happening in the urban fabric. The Deep Thinking Chamber offers a quiet and undisturbed shared meditation space, with highly controlled lighting. Meditation Pods are for individuals to meditate with the presence and observation by others. Finally, the Flexible Dwelling offers not only a living and working space, but also transforms itself into a solitary meditation space.

HACKING THE HOTEL ►

GREEN RESEARCH CENTRE

FENGYI WANG

The 11th arrondissement is one of the most densely populated areas in Paris. The urban fabric presents very few connections with the natural environment. The *Green Research Centre* promotes ecological and environmental awareness, using architecture to reconnect this urban area and its inhabitants with nature. Ecological awareness cannot be increased through information and culture only, or by means of brief escapes and visits to the countryside. Instead, it is a life experience that should be available on a daily basis by living in an environmentally friendly environment.

The design of the *Green Research Centre* includes a public green garden that replaces the existing narrow alley, and allows people to walk, rest, and play regularly, becoming part of their personal natural landscape, identity, and memory. Research laboratories and hotel facilities are intertwined with this piece of nature in the city, where the connection between the interior and the exterior of the buildings is maximized.

Three large columns (“interaction”, “observation”, and “isolation”) are designed to make guests and residents aware of the possibilities given in terms of sustainability by coupling nature with research and technology, showcasing, for example, hydroponic planting and water harvesting systems.

▼ INTERTWINING NATURE AND THE CITY

MUSEUM PIECES

CONG TIAN

Recent developments in information technology and the need to improve the environmental quality of urban space are transforming in a crucial way the troubled relationship between the city and the automobile. The car, seen as a complex product that symbolizes industrial and technological development in popular culture, becomes a museum piece: its dismantling and the exhibition of its disassembled pieces becomes a metaphor for re-assessing other modernist assumptions such as, in architecture, the separation between different programmes within the city.

Museum Pieces aims to create a hotel combined with (cars) exhibition spaces, providing a unique experience for visitors and guests who choose to live in a museum, or be exhibited in a hotel. There are no specific boundaries between the different functional spaces whose programmatic content is organically integrated in one complex system.

IMPROMPTU INTERMEZZI

BEN TSENG AND MASON CHIN

Inspired by the strategic location at the boundary of the 19th arrondissement of Paris, and in close proximity to the growing cultural and musical presence of Parc De La Villette, *Impromptu Intermezzi* addresses the relationship between practise and performance for creative activities. The project incorporates diverse spaces for musicians to live, practise, and perform.

In consideration of the key traffic and pedestrian network around the site, *Impromptu Intermezzi* introduces a new – artificial and natural at the same time – landscape that links to different significant areas of the site, shields the noise and pollution from the adjacent highway, and creates a secluded environment for musicians. Living spaces and spaces for performance are integrated in a range of room typologies in which the “stage” and the room coincide allowing guests of different kinds to live, practise, and perform.

The openness of the building and the landscape aspires to develop a sense of journey and exploration whilst creating an environment fully immersed in music, encouraging visitors and hotel guests to experience the wide spectrum of music genres produced throughout the complex.

BALANCING THE PACE OF LIFE

YIUHAI ZHANG

Under fast economic growth and social progress, the pace of life in the major global cities is now 10% faster than in the early 1990s. Research found that the increased pace of life has a serious impact on the quality of life, for example, making citizens less inclined to help each other and more exposed to develop heart diseases.

The project looks at circulation both within the urban fabric and the buildings as a key element for *Balancing the Pace of Life*. Fast and slow circulation systems are offered to the users of a building complex that includes accommodations, a library, and other study and entertainment spaces for the students of the Paris-Dauphine University. Flexible spaces for reading and rest offer chances to slow down the intense pace of activities in a quiet circulation area that surrounds working and studying spaces. At an urban scale, the project is developed in a gradient between the congested spaces of urban life and the calm atmosphere of the natural environment of the surrounding park.

JUSSIEU SCIENCE INCUBATOR

KEKAI REN

Located in the green area of the Pierre and Marie Curie University campus and in direct connection with the public space facing the Institute du Monde Arabe, the incubator will bring together students, researchers, and the business community, while re-connecting the campus with the city of Paris. The incubator is designed to be an activator for the academic community, as well as a connector between campus life and city life.

Jussieu Science Incubator uses OMA unrealized project for the Jussieu Library as a precedent for reinterpreting the idea of the boulevard and the urbanised surface. “Instead of a simple stacking of floors, sections of each level are manipulated to touch those above and below; all the planes are connected by a single trajectory, a warped interior boulevard grammatic elements. The visitor becomes a Baudelairean flaneur, inspecting and being seduced by a world of books and information - by the urban scenario.”

The project looks for ways of proposing a new kind of urban space, which works on the space for residence and the space for knowledge work. As a result, it provides laboratories, offices, accommodations, and business training hubs, to promote sharing of ideas through the internal mix of different programmes.

BEYOND CURIOSITIES AND CABINETS

ADAM MEARS AND HARRY LEWIS

The Natural History Museum of Paris is a series of four fragmented galleries encompassing the Jardin des Plantes. Although displaying different pieces of Natural History, the galleries are all very much focused on the “front”. In a way there is no difference to how other museum (of this kind) showcase their collections. The front of house is dedicated to the occupant’s awe first and knowledge production second. In contrast, the back of house is put to one side: away from the occupant. Therefore the galleries themselves can be considered cabinets of curiosities.

Beyond Curiosities and Cabinets investigates the way in which life and death is traditionally exhibited through two juxtaposing methods. Taxidermy, apparent in the Grand Gallery of Evolution, and Skeleton Articulation, apparent in the Gallery of Palaeontology and Comparative Anatomy, are the case studies in this exploration. *Beyond Curiosities and Cabinets* then, seeks to challenge the static nature of these traditional exhibits through a series of architectural and urban scale interventions within a new master plan set within the Jardin des Plantes. Composed of seven phases, the master plan connects these galleries together to create a collective ecosystem;

Exhibiting Life, Death and the In-between.

THE PARASITIC TAXIDERMIST

ADAM MEARS

The *Parasitic Taxidermist* is an intertwining of live, work and learn and forms a prescriptive experience through the aesthetic breakdown of the thingness of taxidermy. A component within the *Beyond Cabinets and Curiosities* master plan for the redevelopment of the Paris Natural History Museum, this architectural intervention is positioned within the parameter of the Grande Galerie de l'Evolution. This 18th century gallery houses taxidermy specimens within its vast atrium and plays on light, sound and narrative to bring the exhibition pieces to life. However, the *Parasitic Taxidermist* seeks to re-envision this static nature of natural history exhibition by deconstructing the finished form of taxidermy and displaying it as a process of composition. Primarily a working laboratory for taxidermy creation and restoration, this architectural parasite forms a symbiotic relationship with this "host" museum in which both pieces of architecture habitually rely on the exploitation of each other.

The architecture derives from playing on the irony of Taxidermy: that it requires the complete dismemberment of the animal body for it to be re-articulated to its natural aesthetic state. This new typology in which taxidermists, both living and working, coexist amongst the observer reinterprets this irony through challenging the thresholds that exist between the laboratory, the living accommodation and the museum gallery. By witnessing the development and production of taxidermy vertically through the building, the *Parasitic Taxidermist* brings a new way of observing death through exhibiting the life that exists around it.

THE OSTEOLOGICAL ORGANISM

HARRY LEWIS

The proposal addresses the exposition of skeleton articulation in response to the singular snapshot of death observed in the gallery of Palaeontology, and performs in unison with adjacent museums to display various aspects of natural history. It is a hybridisation of three tightly woven narratives, consisting of the work process, the workers living spaces and the public engagement; who's coexistence creates a unique dialogue between the human and the performative.

The initial concept for displaying the work process focuses on Peter Eisenman's study of the chaos theory. It understands that a dynamic process can't be captured by a single image, and can only be comprehended as a collection. With this understanding; the process of skeleton articulation is broken down into five observable work stages. The transparency of the workspaces orientated along the same axis allow for multiply work stages to be comprehended collectively as well as individually, thus giving an understanding of the transitional elements of the process.

Using the observer's acknowledgement of the workers coexisting with the workspaces as a means of exhibiting the depth of the process of skeleton articulation, the proposal goes beyond merely braking down the work stages and displays compartmentalised living processes which contribute to the production.
