<i>Preface</i>	v
<i>Acknowledgments</i>	ix
1. From reaction–diffusion to Physarum computing	1
1.1 Reaction–diffusion computers	2
1.2 Limitations of reaction–diffusion computers	4
1.3 <i>Physarum polycephalum</i>	5
1.4 Physarum as encapsulated reaction–diffusion computer	8
1.5 Dawn of Physarum computing	12
2. Experimenting with Physarum	15
2.1 Where to get plasmodium of <i>P. polycephalum</i>	15
2.2 Physarum farms	15
2.3 Dishes and scanners	18
2.4 Data input with food	19
2.5 Substrates	20
2.6 Nutrient-rich vs. non-nutrient substrates	24
2.7 Sensing	28
2.8 Modeling plasmodium	34
2.9 Summary	35
3. Physarum solves mazes	37
3.1 Multiple-site start	37
3.2 Single-site start	38
3.3 Summary	42

4.	Plane tessellation	43
4.1	The ubiquitous diagram	43
4.2	Physarum construction of Voronoi diagram	44
4.3	Summary	47
5.	Oregonator model of Physarum growing trees	53
5.1	What a BZ medium could not do	55
5.2	Physarum and Oregonator	55
5.3	Building trees with Oregonator	58
5.4	Validating simulation by experiments	60
5.5	Summary	60
6.	Does the plasmodium follow Toussaint hierarchy?	65
6.1	Proximity graphs	65
6.1.1	Nearest-neighborhood graph	67
6.1.2	Minimal spanning tree	67
6.1.3	Relative neighborhood graph	67
6.1.4	Gabriel graph	67
6.1.5	Delaunay triangulation	67
6.1.6	Toussaint hierarchy	68
6.2	Plasmodium network and Toussaint hierarchy	68
6.3	Preparing for graph growing	70
6.4	Growing graph from a single point	72
6.5	Growing from all points	80
6.6	Physarum hierarchy	85
6.7	Summary	85
6.7.1	Complexity of plasmodium computation	86
6.7.2	Halting problem	86
6.7.3	Reusability	86
6.7.4	Further studies	87
7.	Physarum gates	89
7.1	XOR gate anyone?	90
7.2	Ballistics of Physarum localizations	93
7.3	Physarum gates	95
7.4	Simulation of Physarum gates	101
7.5	Simulated one-bit half-adder	105
7.6	Why do we use a non-nutrient substrate?	107

7.7	Summary	107
8.	Kolmogorov–Uspensky machine in plasmodium	109
8.1	Physarum machines	111
8.1.1	Materials for Physarum machine	111
8.1.2	Nodes	112
8.1.3	Edges	113
8.1.4	Data, results and halting	114
8.1.5	Active zone	115
8.1.6	Bounded connectivity	115
8.1.7	Addressing and labeling	116
8.1.8	Basic operations	118
8.2	Example of Physarum machine solving simple task . . .	120
8.3	On parallelism	122
8.4	Summary	123
9.	Reconfiguring Physarum machines with attractants	125
9.1	Fusion and multiplication of active zones	125
9.2	Translating active zone	129
9.3	Reconfiguration of Physarum machine	130
9.4	Summary	132
10.	Programming Physarum machines with light	135
10.1	Physarum and light	135
10.2	Designing control domains	137
10.3	Trees and waves	138
10.4	Diverting plasmodium	141
10.5	Inertia	141
10.6	Multiplying plasmodium waves	146
10.7	Foraging around obstacles	147
10.8	Routing signals in Physarum machine	151
10.9	Disobedience	154
10.10	Summary	156
11.	Routing Physarum with repellents	159
11.1	Avoiding repellents on nutrient-rich substrate	161
11.2	Operating on non-nutrient substrate	162
11.3	Operation DEFLECT	164

11.4	Operation MULTIPLY	164
11.5	Operation MERGE	167
11.6	Summary	170
12.	Physarum manipulators	175
12.1	Plasmodium on water surface	176
12.2	Manipulating floating objects	179
12.3	Summary	184
13.	Physarum boats	185
13.1	Random wandering	187
13.2	Sliding	188
13.3	Pushing	188
13.4	Anchoring	189
13.5	Propelling	190
13.6	Cellular automaton model	192
13.7	Physarum tugboat	196
13.8	On failures	196
13.9	Summary	199
14.	Manipulating substances with Physarum machine	201
14.1	Operations with colored substances	201
14.2	Transfer of substances to specified location	207
14.3	Mixing substances	209
14.4	Superpositions of TRANSFER and MIX operations	213
14.5	Summary	215
15.	Road planning with slime mould	223
15.1	United Kingdom in a gel	225
15.2	Development of transport links	228
15.3	Weighted Physarum graphs	231
15.4	Physarum vs. Department for Transport	234
15.5	Proximity graphs and motorways	236
15.6	Imitating disasters	238
15.7	Summary	243
	<i>Epilogue</i>	247
	<i>Bibliography</i>	249
	<i>Index</i>	261
